This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-6. (Cancelled)

7. (Currently Amended) A medical testing system comprising:

a. an instrument for monitoring the electrical activity of a patient's heart, the instrument including a work surface and a printing device configured to print a graphical waveform representing the electrical activity of the heart on a medium moving across the work surface; ~~and~~

b. a monitor coupled to the instrument and configured to display images representing the heart; and

~~b~~c. a light source, coupled to the instrument and positioned above the work surface, that directs light toward the work surface to illuminate the work surface;

wherein the light source includes at lest one LED.

8. (Cancelled)

9. (Currently Amended) A medical testing system comprising:

a. an instrument for monitoring the electrical activity of a patient's heart, the instrument including a work surface and a ~~component~~ printing device adjacent the work surface for printing on a medium a graphical waveform representing the electrical activity of the heart; ~~and~~

b. a monitor coupled to the instrument and configured to display images representing the heart; and

~~b~~c. a light source, coupled to the instrument and positioned above the work surface, that directs light toward the work surface to illuminate the work surface and is adapted to illuminate the medium.

10. (Currently Amended) The system of claim 9, further comprising a supporting component that includes a plate ~~fixed in~~ adapted to support the monitor at a position above the instrument, the plate including the light source.

11. (Previously Presented) The system of claim 9, wherein the instrument includes a power source, the light source being coupled to the power source.

12. (Cancelled)

13. (Previously Presented) The system of claim 9, wherein the instrument is an electrocardiograph.

14. (Current Amended) A medical testing system comprising:

a. an instrument that monitors the electrical activity of a patient's heart, said instrument including (1) a work surface, (2) a printing component configured to print on a medium, moving across the work surface, a graphical waveform representing the electrical activity of the heart, ~~and~~ (3) a power source coupled to the printing component and (4) a monitor coupled to the instrument and configured to display images representing the heart; and

b. an illuminating component, coupled to the power source and positioned above the work surface, which illuminates the work surface.

15. (Currently Amended) The system of claim 14, further comprising a supporting component engaging the instrument for supporting both the monitor and the illuminating component above the ~~instrument~~ work surface.

16. (Original) The system of claim 15, wherein the instrument includes a keypad adjacent the work surface.

17. (Original) The system of claim 16, wherein the illuminating component illuminates the keypad.

18. (Original) The system of claim 14, wherein the illuminating component includes at least one light emitting diode.

19. (Cancelled)

20. (Currently Amended) A medical testing system comprising:

a. means for monitoring the electrical activity of a patient's heart, the means for monitoring including (1) a work surface, (2) a means for printing on a medium, moving across the work surface, a graphical waveform representing the electrical activity of the heart, ~~and~~ (3) a power source coupled to the means for printing, and (4) means for displaying images representing the heart separate from the printed medium; and

b. means coupled to the power source for illuminating the work surface.

21-35. (Cancelled)
